

## **MAINTENANCE & INSTRUCTIONS**

### **Powder Coated Finishes**

#### **THERMOPLASTIC POWDER COATING**

THERMOPLASTIC COATINGS OFFER A THICKER FINISH THAN TRADITIONAL THERMOSETTING POLYESTER POWDER COATS. FURTHERMORE, THIS AMAZINGLY TOUGH AND VISUALLY PLEASING COATING OFFERS THE ADDED ADVANTAGE OF BEING FIELD REPAIRABLE. LONG USED BY THE NAVY TO SPRAY THE CANNONS ON THE DECKS OF THEIR BATTLESHIPS, THIS COATING IS ALSO MORE RESISTANT TO SALT SPRAY AND THE ELEMENTS THAN ARE TRADITIONAL THERMOSETTING POLYESTER POWDER COATS. FOR THESE REASONS, THERMOPLASTIC POWDER COATS ARE AN IDEAL ALTERNATIVE TO THERMOSETTING TGIC POLYESTER POWDER COATS FOR STEEL PIPE BICYCLE RACKS AND STEEL SITE FURNISHINGS.

#### **Maintenance Instructions**

POWDER COATED PRODUCTS SHOULD BE CLEANED WITH NON-ABRASIVE COMMERCIAL GRADE SOLVENT.

THIS FINISH MAY REQUIRE TOUCH UPS OVER TIME IF SCRATCHED OR DENTED. APPLY
